

**Bronwyn Camac**

BSc App Sc in Applied Geology  
PhD Engineering Science (by Research)

**Manager Cooper Unconventional Resources, Unconventional Resources and Exploration, Eastern Australia, Santos Limited**

Bronwyn has over 25 years' experience in the oil and gas industry as a geologist in both conventional and unconventional resources. Bronwyn has worked in the early days for Comalco Exploration (now part of Rio Tinto), Wiltshire Geological Services, Origin Energy, Beach Energy and is currently working at Santos Ltd in Adelaide.

Bronwyn gained her PhD in Engineering Science in 2010, which focussed on using numerical modelling methods to predict fractured shale rock, and maintain interest in this area supervising various post-graduate projects and application of the techniques in unconventional resources.

Currently, Bronwyn is the Manager, Cooper Basin Unconventional Resources, responsible for the exploration and delineation of various unconventional plays for the Eastern Australian Business Unit in Santos.

Bronwyn was a finalist in the 2015 SA Women in Resources Awards, Exceptional Woman in South Australian Resources.

"I think the best things about working in the Oil and Gas Industry are the people and the challenging projects. Typically working 2-4 km under the ground, where remote sensing and geophysical modelling techniques are required is technically interesting and working with a great team is personally rewarding."
